

# Unified Mailbox

## Unified Messaging for IBM Lotus Notes & Domino

Get Voice Mail, E-mail, and Fax all in your Notes mailbox

### Voice Mail for Notes

Unified Mailbox provides the most complete and advanced Voice Mail & Unified Messaging solution for Lotus Notes and Domino. All your messages - including voice mail, e-mail, and fax are stored right in your Notes mailbox. Any message can now be accessed anytime, anywhere, using any device. Whether in your office or out on the road, Unified Mailbox makes your employees more accessible, responsive, and efficient.

### Anytime, Anywhere, Any Device

Now you can view, manage, and listen to your voice messages right from your Notes mailbox or web browser. When out of the office, a simple phone call allows you to hear not only your voice messages, but listen to your e-mails as well. E-mail messages are quickly filtered and read to you over the telephone using the latest technology human sounding Text to Speech conversion. You can save, delete, reply, forward, and even fax any message right from the telephone (as well as from the desktop or web). You can even listen to an e-mail message and send a voice mail reply. A laptop is no longer needed when traveling - just call into your Notes mailbox by phone whenever you have a free moment. Travel is more convenient, and message access and response is faster.

### Supports Your Environment

Unified Mailbox works with all versions of Notes and Domino. Integrates with any phone system or PBX. Ideal for any size company. Call today for complete information and a price quotation.

- *Simple to install, easy to manage - Runs along side your existing servers, uses your existing Domino Directory*
- *Speeds and enhances communication, improves productivity and accessibility, reduces costs, improves customer satisfaction*

### How It Works

The Unified Mailbox system is simply software and a telephone interface board added to one of your Domino servers. The Unified Messaging software is installed onto a server and an industry standard Dialogic telephone interface board is plugged into that machine. Several phone extensions are attached from your PBX or phone system to this Dialogic card, and all configuration is done through a Domino database or web. That's all there is to it. We can use your existing Domino Directory, and use your existing Notes mail files. Unified Mailbox is a powerful Domino integrated solution which extends and leverages your company's Domino investment and infrastructure.

### Requirements

- Pentium 4 CPU
- 512 MB memory
- 500 MB disk space
- Win NT / 2000 / XP
- Domino Server R5/R6
- Dialogic voice board
- Any phone system or PBX

## Unified Mailbox Products

**Unified Messaging.** All messages (voice mail, e-mail, fax) in your Notes mailbox.

Unified Mailbox provides the most complete and advanced Voice Mail & Unified Messaging solution for Notes and Domino. All messages are stored in your Notes mailbox and can be accessed anytime, anywhere, using any device.

**E-mail Reader Only.** Access your e-mail by phone - anytime, anywhere.

Not ready for Unified Messaging? This product is a sub-set of the full Unified Messaging product above, which allows you to keep your existing voice mail system. Your Notes mailbox is now just a phone call away. Pick up any phone and listen to your Notes e-mail. Filter messages to quickly get just the information you need. Instant access lets you hear, save, delete, reply, and forward by phone. Enables travel without a laptop.

**Domino Access by Phone Toolkit.** Pick up any phone and instantly access your Domino applications.

Call into your existing Domino databases and applications, fill out forms by phone, have information read to you, forward or fax out information, approve or automate processes, etc. Commonly used for Helpdesks, Sales Force Automation, Human Resource applications, etc. Either use our Toolkit to add your own telephone access, or our services team can quickly do it for you. Fast, efficient, inexpensive.
